Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 and 12-14, drawn to a cold block with two flow passages, one for beverage and one for coolant, classified in class 62, subclass - -.
- II. Claims 7-11, drawn to a heat exchanger with one flow passage, classified in class 165, subclass 172.

The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the cold plate of claim 6 does not specify the particulars of the heat exchanger of claim 7 (e.g. the diameter limitations in heat exchanger claim 7 are not claimed in the cold plate of claim 6). The subcombination has separate utility such as a heat exchanger of general utility such as one on which air is passed over the outside of the tubes.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
